Staff

The Morris County Mosquito Commission has a full-time staff of employees that work year round to control mosquito populations in the county. Water management, surveillance, public education, service requests, site inspections and pesticide applications are part of this varied program.

Administration and Office Staff

The Superintendent of the Commission also serves as the Commission Secretary. The Superintendent oversees the daily operation of the Commission. The office staff of two is the first point of contact for the public. Along with their administration duties they also process all the service requests from the public.

Biology

Two full-time biologists are on staff. The biologist role is to do surveillance of mosquito populations, identify mosquitoes, assist in coordination of the airspray program, and participate in the disease surveillance aspect of the Commission. Seasonal staff are often hired to assist with this important work.

Water Management

The Water Management staff consists of the General Supervisor who oversees the crew of laborers and a heavy equipment operator. The Wetlands Specialist acquires all permits for water management projects. Work includes, ditch maintenance, river and stream cleaning, and stormwater system maintenance. Cooperative projects with other county agencies and municipalities is common.

Inspection

Under the direction of the Chief Inspector, inspectors are required to check designated areas of the county called "districts". The areas are treated as necessary by hand or with ATV's. The inspectors also assist with surveillance, service requests, air spray, and tire collection.

Maintenance

Two maintenance staff are available to maintain commission vehicles and property.
