IMPORTANT INFORMATION ABOUT LEAD IN YOUR DRINKING WATER

This Notice is being sent to you by	the, Water System	ı ID# NJ
found elevated le	vels of Lead in drinking water in	some buildings. Lead can cause
serious health problems, especial	ly for pregnant women and yo	ung children. Please read this
information closely to see what you	can do to reduce Lead in your drin	ıking water.
A Lead level of parts per bil	lion (ppb) or μg/L was reported a	at the 90 th percentile for
samples collected on		-
States Environmental Protection A	gency's (EPA) action level of 15	ppb or µg/L. The individual tap
results for Lead from the	samples that were tested during	is provided on the last
page of this Notice	-	

What Does This Mean

Under the authority of the Safe Drinking Water Act, EPA set the action level for Lead in drinking water at 15 ppb. This means utilities must ensure that water from the taps used for human consumption do not exceed this level in at least 90 percent of the sites sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. If water from the tap does exceed this limit, then the utility must take certain steps to correct the problem. Because Lead may pose serious health risks, the EPA set a Maximum Contaminant Level Goal (MCLG) of zero for Lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expressed risk to health. MCLGs allow for a margin of safety.

Health effects of Lead

Lead can cause serious health problems if too much of it enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of your body. The greatest risk of Lead exposure is to infants, young children and pregnant women. Scientists have linked the effects of Lead on the brain with lower IQ in children. Adults with kidney problems and high blood pressure can be affected by low levels of Lead more than health adults. Lead is stored in the bones and it can be released later in life. During pregnancy, the child receives Lead from the mother's bones which may affect brain development.

Sources of Lead

Lead is a common metal found in the environment. Drinking Water is one possible source of Lead exposure. The main sources of Lead exposure are Lead-based paint and Lead-contaminated dust or soil, and some plumbing materials. In addition, Lead can be found in certain types of pottery, pewter, brass fixtures, food, and cosmetics. Other sources include exposure in the work place and exposure from certain hobbies (Lead can be carried on clothing and shoes). Wash your children's hands and toys often as they can come into contact with dirt and dust containing Lead.

New brass faucets, fittings, and valves, including those advertised as "Lead-free," may contribute Lead to drinking water. The law currently allows end-use brass fixtures, such as faucets, with up to 8 percent Lead to be labeled as "Lead free." However, plumbing fixtures labeled National Sanitation Foundation (NFS) certified may only have up to 2 percent Lead. Consumers should be aware of this when choosing fixtures and take appropriate precautions.

EPA estimates that 10 to 20 percent of a person's potential exposure to Lead may come from drinking water. Infants who consume mostly formula mixed with Lead-containing water can receive 40 to 60 percent of their exposure to Lead from drinking water.

Don't forget about other sources of Lead such as Lead paint, Lead dust, and Lead in soil. Wash your children's hands and toys often as they can come into contact with dirt and dust containing Lead.

Steps you can take to reduce your exposure to lead in drinking water

When water stands in Lead pipes or plumbing systems containing Lead for several hours or more, the Lead may dissolve into your drinking water.

- 1. <u>Run your water to flush out Lead</u>. Run water for 15-30 seconds or until it becomes cold or reaches a steady temperature before using it for drinking or cooking, if it hasn't been used for several hours. This flushes Lead-containing water from the pipes.
- 2. <u>Use cold water for cooking and preparing baby formula</u>. Do not cook with or drink water from the hot water tap; Lead dissolves more quickly into hot water. Do not use water from the hot water tap to make baby formula.
- 3. <u>Do not boil water to remove Lead</u>. Boiling water will not reduce Lead.
- 4. <u>Use alternate sources or treatment of water</u>. You may want to consider using bottled water for drinking and cooking or a water filter designed to remove Lead. Read the package to be sure the filter is approved to reduce Lead or contact NSF International at 800-NSF-8010 or www.nsf.org for information on performance standards for water filters. Be sure to maintain and replace a filter device in accordance with the manufacturer's standards to ensure water quality.
- 5. <u>Get your child tested</u>. Contact your local health department or healthcare provider to find out how you can get your child tested for Lead if you are concerned about Lead exposure.

What is Being Done

If required, explain actions being taken by water system to address Lead (e.g., Our source water and distribution plumbing are being evaluated to determine appropriate corrective actions to control Lead levels in our drinking water. The monitoring frequency for Lead and Copper at _____ will be increased to every six-month until compliance is achieved.

For More Information

You can consult a variety of sources for additional information on reducing Lead exposure and the health effects of Lead.

- 1) Your health care provider (family doctor or pediatrician) can provide you with information about the health effects of Lead and can perform a blood test for Lead.
- 2) The NJ Department of Health and Senior Services at 609-633-2043 can provide you with information about the health effects of Lead.
- 3) The Morris County Office of Health Management at _____ can provide you with information about the health effects of Lead.
- 4) EPA's website at www.epa.gov/Lead can provide you with information on the health effects of Lead and reducing Lead exposure.

5) The National Lead Information Center at 426-4791 can provide you with informat Lead.		E
